

CASSETTO®

Swing-Zipscreen and Swing-Shutter in one system

Swing-Zipscreen and swing shutters by Klappex are structurally identical and can be easily operated in any angle. This can be possible by a new system that rotates when the cassette frame is exposed to the guide rail frame. The same design allows correspondingly attractive variations in the same structure.

Distinguished with the
Federal Award 2015

No matter if residential, office or business premises, combination of the sun, privacy and burglary protection with improved indoor climate and optimal visibility to the outside.

CASSETTO®

Klappex® Swing-Zipscreen

Flared CASSETTO Swing-Zipscreen

CASSETTO Zipscreen

With the new Swing-Zipscreen and Swing-Roller-Shutter, Klappex, after the thermal renovation of the roller shutter, which in the meantime has been manufactured thousands of times and imitated and rebuilt by large roller shutter manufacturers, is once again launching a future-oriented product.

A cassette integrated in the roller shutter box is firmly connected to the kink-free roller shutter rails and rotates when it is displayed. Thus, the flow and discharge is secured in any position. Both roller blinds or zipscreen hangings can be used. **In addition, the equipment with integrated fly screen roller blind is possible in both variants.**

A clean up and down is usually not possible with conventional buckling rails in flared state.

Drive and operation

For raising and lowering both types of blinds, the adjacent drives are optionally available. For battery operation, a solar cell can optionally be integrated.

Belt drive mechanism

Affordable solution, which can also be used on the already existing Rollotron.

SYSTEM

NEW!

Klappex® Swing-Shutter

Swing-CASSETTO®

The kink-free guide rail ensures a clean up and down of the respective curtain in every deployment angle.

Flared CASSETTO Swing-Shutters

CASSETTO Shutters

12V battery operation

Optionally with solar panel and/or remote control. *Advantage:* Power lines are not required.

230V motor drive

Optionally with remote control and 1/0-control.

CASSETTO®

Swing-Zipscreen and Swing-Shutter in one system

Whether because of sun, sight or burglary protection, a facade should also architecturally give a worth seeing overall picture.

Swing-Shutters and Swing-Zipscreen from Klappex meet this requirement due to the construction of the elements. Owners, homeowners or architects have the choice of over 100 color combinations for roller shutters and screen.

Shutters and screens can be combined individually, e.g. shutters on the ground floor and screen on the upper floors. Every combination is feasible and provides a suitable appearance with appropriate color choice.

Environmentally aware builders who have opted for the rechargeable battery drive, charge the battery without any cost through an integrated solar cell from the sun.
