

Cassetto® fully opening shutters.....

When rolling out the new Cassetto roller shutter, the shutter cassette also rotates. This makes the roller shutter truly unique.

It ensures that the roller tracks won't bend when rolling out the shutter. This also allows easy rotation of the roller shutter shell at every position.

In conjunction with the cassette's turning point situated in the box, centre, the continuous roller adjustability ensures optimal protection against light and sunrays.

Improved ventilation and lightening of the rooms increases living comfort. The optional insect protection roller keeps out unwanted nuisances. Our retailers or you yourself can do the fitting, whichever you prefer.

For additional advantages and possible Cassetto applications, check us out online at:

**...the roller shutter
without bending track !**

**Cassetto® is an innovation by the developer of KLAPPEX® THERMO
roller shutters and has been submitted as a patent .**

Opening roller shutters

Why rolling instead of bending?

Cassetto® roller shutter with
„rotating cassette“

Opening shutter
with „bending track“

Cassette turning point

Cassetto Type A
Front-mounted roller shutter
„with opening function“

Cassetto Type B
Front-mounted roller shutter
„without opening function“

Cassetto Type C
Front-mounted roller shutter
„with cleaning function“

„bend-free“ guiding track

Shutter shell runs smoothly in every position optimal and continuous light and sun protection particularly large field of vision and improved room ventilation. The Cassetto can be opened up to 45 cm degree angle.

Comfortable cleaning function :

After loosening 2 screws, it is possible to lift the roller shutter frame and its frame almost horizontally. Elegant design.

„Bending point“ guiding track

„Bending“ guiding rails implement the above advantages not at all or only partially.

The opening frame of the Cassetto roller shutter **TYPE A** can be adjusted. Both in its open and closed positions, a central lock allows closing the roller shutter. Whenever necessary, it is possible to position the opening frame in an almost horizontal cleaning position after loosening two screws. This enables cleaning the inner roller shutter side also when the roller shutter is located in front of fixed glazing.

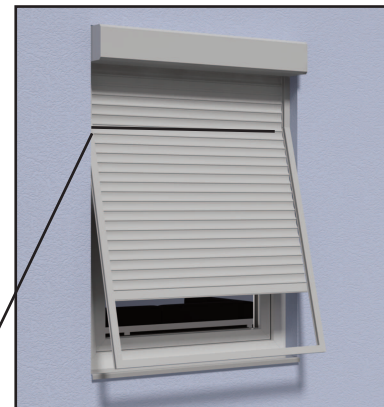

Cassetto roller shutter **Type B** can be used where opening the shutters is not necessary but where the same look as for the releasable roller shutter is desired.

Type C is an economical model of the Cassetto roller shutter for fixed glazing that enables cleaning the interior of the roller shutter shell. Loosening two screws allows placing the window in an almost horizontal position.

All Cassetto roller shutters can optionally be delivered with integrated insect protection shutters.
